In the heat of the moment, your business continuity plan must perform flawlessly.

Testing is an essential part of business continuity that ensures your plan is executable. Using a controlled environment guided by our team of experts, you can strengthen your plans, build business resilience, clarify organizational responsibilities, and guarantee your resources meet your recovery needs.

Office Space
Office space complete with modern office setting.

Power
Power generator for your business.

Technology
Computers, servers, printers, and fax machines.

Connectivity
Satellite for phone and Internet connection.

Agility will help you conduct a comprehensive recovery exercise with all four key elements, including Office Space, Power, Connectivity and Technology in a single simulated recovery event. These options provide an exhaustive exercise run for a recovery scenario by placing you and your recovery assets in an entirely realistic recovery environment.

TEST YOUR CORE RECOVERY ELEMENTS

Office Space

For a fraction of the cost of maintaining your own hot site, you can have all the accessibility and flexibility you need to restore operations at or near your current location.

The recovery space can be set up at an Agility test facility in our test lab to simulate an office space. We can also deploy our mobile unit to your location to accommodate your testing preferences. Our Test Manager will guide you through the process during a two-day test.

Power

Agility has guaranteed access to generators transported directly to your location(s), along with 50' of cabling, fuel service and scheduling, and expert support through the process.

Once delivered to your location, a generator can be connected either to your electrician-installed power transfer switch or to a power distribution system that provides electrical outlets inside of your building independent of the main electrical system. For your convenience, we can arrange this setup outside of office hours to avoid any disruption to your business.

Technology

To make a recovery as smooth as possible, we advise testing your IT recovery processes using Agility's equipment. There are several options for that: We'll ship the equipment to you for testing ("QuickShip"), or you can visit one of our Testing Facilities ("On-site"). In case you need some time to clear your hard drives of malware or require extra monitors for training, Agility will have replacements for you in less than 24 hours.
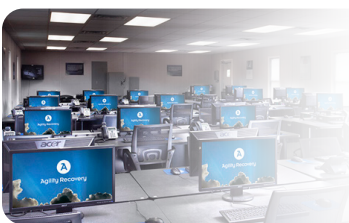

Connectivity

By testing voice and data communications over Agility's satellite link, you can validate recovery connectivity with your key clients, vendors, and remote offices. Testing connectivity is vital to a smooth recovery, allowing you to fine-tune configurations ahead of time and have Agility store those configurations for future tests or recoveries. Our engineers can work with you to provide custom solutions for data connections and phone systems and flexible testing options.

TESTING TYPES

QuickShip Test

For this test, Agility ships the equipment such as servers, desktops, and monitors to your location for three consecutive days of testing. This allows your team to confirm your technology package supports your work requirements. Your Test Manager and Strategic Account Manager will coordinate shipping, delivery, and pick up with you. All shipping costs are passed through, and an 8-weeks' notice is required.

On-site Test

Agility has two facilities for testing and fulfillment in Las Vegas, NV, and Atlanta, GA. On-site tests consist of two consecutive days of testing. Under the guidance of our network team and your dedicated Test Manager, your team will be able to experience working inside of an actual recovery environment. Additional days and hours are available upon request. Eight-weeks' notice is necessary.
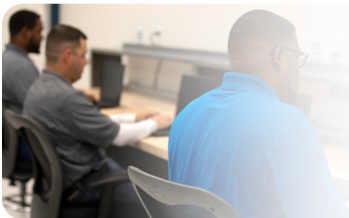

Remote Site Test

Currently, Agility offers remote mobile testing centers with all necessary equipment in then following locations: Sacramento, CA; Hatfield, PA; College Station, TX; Kansas City, MO; Northborough, MA; Oakville, ON. Our Hatfield and Oakville locations have a Singlewide unit and all others have Mobile Recovery Centers. These locations are not staffed, so the travel and living costs for an Agility Recovery employee are passed through. The sites are available from 9 a.m. till 5 p.m., Tuesday through Friday. Please plan 8 weeks ahead.

Mobile Tests

For your convenience, Agility can deliver any or all the components of your ReadySuite solution to your location. These tests involve a minimum of one setup day for our staff, two consecutive days of testing, and another day for equipment removal. We will pass through all incurred costs, including delivery, setup, tear down, and travel for the Agility Recovery Network Engineer on-site. Please plan 8 weeks ahead.

ReadyOffice Testing

Your team can practice working in your ReadyOffice environment for two consecutive days each year. These centers include private workplace recovery suites with desktops, printers, managed telephone systems with DIDs, high-speed internet, and access to business lounges. All incurred costs will be passed through, and an 8-weeks' notice is required.

Tabletop Test

This exercise walks through a simulated, scripted crisis and asks participants to respond and react as the event unfolds. It clarifies roles and responsibilities and often identifies gaps in business continuity plans. We provide your business with a scenario, and one of our Strategic Account Managers runs the test with you.

SCHEDULE A TEST

Contact your Strategic Account Manager at testrequests@agilityrecovery.com for any questions and to ask for the Test Request Form.

With an end-to-end solution, such as Agility Recovery, businesses can recover **4 times faster** than with no BCM solution.
